

Know Where Equipment is, and What it's Doing

Install SolarTrak GPS trackers on your construction or rental equipment, and here's what you'll know:

- GPS location of your equipment
- Alerts by email or text when it moves
- Engine-hour reports record operation
- Reminders when maintenance is due
- Battery voltage monitoring

With SolarTrak fleet management, you'll never "misplace" equipment. You'll know where it is, and you'll be alerted when it moves.

Capture all your rental income. You'll know if and when it was operating on our Engine Hours calendar.

SolarTrak will also help to keep your fleet healthy, by sending you reminders when routine maintenance is due.

Save Time, Money and Aggravation:

- No more misplaced equipment
- No job delays - know that the equipment is in place and ready to use
- More efficient use of your Repair Crew - send them right to the affected machine
- Easy and accurate billing
- Optimize the life of your asset

...all for less than \$10 per month per tracker!

"This technology is incredible and lets us better monitor our equipment"

Steve Scattolini
Wistar Equipment, Carney's Point, NJ

"Easy to install and track the units."

John Robidoux
West Coast Equipment LLC, Corona, CA

"Use of SolarTrak has definitely helped with tracking our machines and billing. It's well worth the investment."

Trevor Allen
Eastern High Reach, Horsham, PA

"It's a simple hook up, user friendly - good job."

Michael Taiji
Highway Specialty, Redding, CA

This is a sample of the data that will help you track, monitor and manage your fleet:

GPS Tracking and Online Fleet Management Solution ...for under \$10 per month!

How SolarTrak Works:

Each tracker is installed on your equipment and connected to the engine's battery. The tracker uses GPS satellite communication to mark its location, and a modem and cellular service to report information to our secure servers. You can access the data from our online SolarTrak software by pc, tablet or smart phone.

Easy to Customize: SolarTrak lets you sort by asset type, branch, geofences, assets that recently moved, and other filters, and create Reports on Tracking, Geofences, Engine Hours, Stops, Maintenance Due, Maintenance History and other features.

Asset Detail

The Asset Detail screen shows all the data for a single piece of equipment in a snapshot.

You can see location (by GPS coordinates and street address), movement history, whether maintenance is due, the battery voltage, the engine hours calendar, and more.

You can even click on the Google or Bing link in the address, which will provide your crew step-by-step driving directions.

Engine-Hours Calendar

Your billing department will love the Engine Hours Calendar.

SolarTrak will record every engine start and stop, and give you totals for the day, week and month. If a customer keeps your equipment beyond their contract, you'll know whether it was operating over the weekend, and can recoup rental income.

Geofences and Notifications

With the Geofence feature, you can draw a virtual fence around an area on your tracking map, and SolarTrak will notify you if your equipment enters or exits that space. Create a geofence around a customer's project, your territory, your branch offices, or your own equipment yard.

Notifications can be modified – you determine when, how and under what circumstances you or your crew are alerted.

Choose External or Internal Antenna options

Installation Guides are available.

TYPICAL INSTALLATIONS

Affordable? Yes!

No contracts. Choose to buy or rent trackers. No cellular service charges.

Price is \$9.95 per tracker per month. No installation charges or set-up fees. Trackers with external antenna are \$10.95 per month.

Access data by pc or smartphone

Designed for construction and rental equipment such as:

Skid Steers
Back hoes
Boom lifts
Generators

Excavators
Air compressors
Pickup trucks
Message boards

Arrow boards
Mini-excavators
Wood chippers
Rollers
