

GPS trackers for Fleet Management.. for *under \$10 per month per asset!*

SolarTrak is a Fleet Management system that uses GPS and telemetry technology in trackers to track, monitor and help you manage your fleet of rental equipment.

SolarTrak will help you make more efficient use of your equipment, manpower, service crews - and your own time. Here's how:

What SolarTrak Does	How This Helps You	How You'll Save \$\$\$
Tracks Location of Equipment	Tells you location by street address and GPS co-ordinates. Was the equipment delivered to the right work site? You'll know.	Never "misplace" equipment again!
Records Engine-Hours	Accurate Billing! See exactly when equipment is operating, and for how long... on a calendar. Summarize by day, week and month.	Increase revenue. Capture every hour the equipment is operating.
Sends Maintenance Reminders	Your fleet is your biggest asset. Extend the life of your equipment by ensuring that its functioning at optimal capacity.	Earn more income by keeping your equipment healthy - and rentable - longer.
Monitors Battery Voltage	Battery voltage starting to decline? You'll get notified before the situation is critical.	Address battery issues before the equipment goes down.
Battery Theft Notification	Get a power notification as soon as equipment shuts down. Send crews with a replacement to keep the asset - and the rental - productive.	Reduced downtime equals more rental revenue + bad guys lose!
Keeps Customers Honest	Ever been told a unit is broken? Or stolen? Or that it sat idle over a weekend? Now you'll know exactly if and when it was operating.	Locate "lost" equipment. Collect every dollar for every minute of use.

Other Creative Uses for SolarTrak Data

Use the Branch Organization Function

Set up your regular customers as branches and give them rights to view and monitor the equipment. Create geofences around their projects for movement alerts. End misuse, billing disputes and miscommunication issues.

Win Bids with GPS/Telemetry Requirements

Some government contracts now require GPS/telemetry capabilities. Why leave opportunities on the table? Set yourself apart from your competitors!

Reduce your Insurance Bills

Insurance companies love being able to track equipment that they insure. Ask your agent about possible discounts on your policy.
